

World Recycling Day

I. C. "G. Galilei" Tradate Erasmus + 2017-2019

World Recycling Day — 15 November 2018

World Recycling Day began in the United States in 1994. At that time, the aim was to encourage consumption of products made from recycled materials. Today, recycling has become a major environmental challenge: it is an important condition for introducing a circular economy that protects the environment.

The III E class has publicized the event with a billboard hanging in the atrium of the school

The students have painted scenarios of uncontaminated environments

They have reflected on the problems of pollution and on the recycling process

At school there are numerous areas for separate waste collection

Every day the students commit to separate waste collection

Together we have to plan our annual recycling activities

To protect the environment all of us have to optimize the recycling process and the various waste recovery and recycling solutions
